## **HOBART wins Mercury Award**

### **Mark of Excellence for LInE Technology in the Field of Airline Catering**

At the ITCA EUROPE trade fair for travel and airline catering this year, which recently took place in Nice, the dishwasher technology specialist HOBART won the prestigious Mercury Award in the equipment category.

The winner of the Mercury 2008 was the LInE/PREMAX system developed by HOBART and the LSG Sky Chefs, which is probably the most innovative and productive dishwasher system for use in airline catering worldwide.

Apart from meeting the criteria as regards innovation and economy, the LInE/PREMAX system also convinced the jury as a most environmentally friendly solution.

The PREMAX models use only about half the fresh water of conventional machines and also require less chemicals and energy.

For HOBART, the LInE/PREMAX systems designed for airline catering are only the first step in introducing the PREMAX technology at a global scale to other commercial warewashing applications.

Previous winners of the Mercury Award include well-established companies such as Qantas, Lufthansa, British Airways and KLM.

HOBART as a leading innovative supplier of energy and water saving products is proud of having won this important industry award.
