Subject: Hobart ECOLO food waste handling products attains Watermark

Approval

The range of **Hobart ECOLO** food waste handling products have attained Watermark Approval meeting ATS5200.028.

The **Hobart ECOLO** series utilises a 2 phase process to reduce the physical volume of kitchen generated food & other organic waste by up to 80%, therefore reducing the costs associated with labour, storage and transportation of the waste.

The 1st phase utilises water as a transport and lubricant medium to assist in grinding the food & other organic waste to a pulp. The 2nd phase sees the waste pulp squeezed in a screw press to dewater and reduce the waste volume by up to 80%. The water squeezed out of the pulp is re-circulated for further waste processing.

Hobart ECO355 compact unit

The **Hobart ECOLO** series of products can be installed as a single self contained unit (ECO355) or as a modular system with up to 3 grinding modules feeding 1 remotely located screw press unit. At peak times the screw press can process up to 7.5kg per minute.
