GENERAL LEGEND

AW	= drain water	KW	= cold water		= above finished floor
Dat	= dataline	KWw	= cold water soft	SFB	= separate filling-boiler
EZ	power line (supply)	LR	= conduit Ø	VEW	 demineralized water
FD	= floor opening	CNS	= stainless steel (inox)	WD	wall opening
HW-VL	= hot water flow	MK	supply chanell	WS	= wall slot
HW-RL	= hot water return	PA	equipotential conductor	WW	= warm water
KB	= cored hole Ø	STL	= control line	WWw	= warm water soft

GENERAL INFORMATION

<u>Connections</u>: The connection of the dishwasher to all services (e.g. electrical, water, drain, exhaust) must comply with all national and local codes of practice and must be carried out by qualified people.

Attention: If the dishwasher has a frequency inverter included and is connected after a RCD

(FI PROTECTIVE SWITCH), this must be AC/DC sensitive type B.

<u>Exhaust</u>: A frost-protection flap is recommended if the exhaust air from the machine is ducted directly outside. If an exhaust hood is installed on top of the dishwasher, an airgap of min. 150mm needs to be maintained. Operational fluctuations can lead to a temporary higher exhaust temperature and humidity (VDI 2052)

Dimensions: Dimensions in the drawing are finished dimensions in Millimeters.

<u>Transport:</u> Minimum measurements of entry doors = outer largest dimension of machine height + 300mm; machine width + 400mm!

Ventilation: The ventilation and exhaust for the room must be according to VDI 2052. Radiated heat emissions must be

Shut-off valves: The isolating valves for rinse water, tank filling or demi-rinse are to be supplied by others.

Wash result: A streak free result is achievable with low mineral concentration of the rinse water only (see caption "water conductivity). If peccessary a de mineralization system should be installed.

"water/conductivity). If necessary a de-mineralization system should be installed.

Floor drain: Splash floor drains should be installed for machine cleaning and for general cleaning purpose.
